

REPORT FOR
“ARTISTRY – AN ART SELLING WEBSITE”
MADE USING HTML , CSS & JAVASCRIPT
AS A PROJECT WORK FOR THE COURSE
INTERNET PROGRAMMING LABORATORY (CSE326)

NAME: PRATIMA MALI

REGISTRATION NUMBER: 12205810

ROLL NUMBER: K22EQA18

SUBMITTED TO: DIVYA THAKUR

DATE OF SUBMISSION:01/12/2022

SEMESTER: FIRST SEMESTER

SCHOOL OF COMPUTER SCIENCE AND ENGINEERING
LOVELY PROFESSIONAL UNIVERSITY, JALANDHAR, PUNJAB,
INDIA.

DECLARATION

I hereby declare that the project work entitled “**ARTISTRY**” submitted to the Lovely Professional University , is a record of original work done by me under the guidance of **Divya Thakur Ma’am** ,
The results embedded in this projects are not copied and submitted to anyone else.

- 4. RESULT**

HTML

1.1 INTRODUCTION:

HTML stands for Hyper Text Markup Language. It is used to design web pages using a markup language. HTML is the combination of Hypertext and Markup language. Hypertext defines the link between web pages. A markup language is used to define the text document within the tag which defines the structure of web pages. This language is used to annotate (make notes for the computer) text so that a machine can understand it and manipulate text accordingly. Most markup languages (e.g. HTML) are human-readable. The language uses tags to define what manipulation has to be done on the text.

CSS

Cascading Style Sheets, fondly referred to as CSS, is a simply designed language intended to simplify the process of making web pages presentable. CSS allows you to apply styles to web pages. More importantly, CSS enables you to do this independent of the HTML that makes up each web page. It describes how a webpage should look: it prescribes colors, fonts, spacing, and much more. In short, you can make your website look however you want. CSS lets developers and designers define how it behaves, including how elements are positioned in the browser.

While html uses tags, css uses rulesets. CSS is easy to learn and understand, but it provides powerful control over the presentation of an HTML document.

JAVASCRIPT

JavaScript was initially created to “make web pages alive”.

The programs in this language are called *scripts*. They can be written right in a web page’s HTML and run automatically as the page loads.

Scripts are provided and executed as plain text. They don’t need special preparation or compilation to run.

For instance, in-browser JavaScript is able to:

- Add new HTML to the page, change the existing content, modify styles.
- React to user actions, run on mouse clicks, pointer movements, key presses.
- Send requests over the network to remote servers, download and upload files (so-called [AJAX](#) and [COMET](#) technologies).
- Get and set cookies, ask questions to the visitor, show messages.
- Remember the data on the client-side (“local storage”).

1.2 PROJECT :

SNAPSHOTS

Featured Products

face-eye sketch
★★★★☆
Rs.1499

Oil Canvas
★★★★☆
Rs.1499

Paper Art Sketch
★★★★☆
Rs.1499

Oil Canvas Smooth
★★★★☆
Rs.1499

Latest Products

Nostalgia Art
★★★★☆
Rs.1999

four-faces
★★★★☆
Rs.1999

Pop Art
★★★★☆
Rs.1999

Charlie Chaplin
★★★★☆
Rs.1999

Give your place A new look!

Anyone can put paint on a canvas,
but only a true master can bring the painting to life.

1.4 RESULTS:

1. from this project of making website, I came to gain practical knowledge about the HTML , CSS , JavaScript.
2. Using this website people can access to the artistic content and can buy them.
